We offer free update service for one year.

**Exam** : **000-M23**

**Title** : IBM Host Access  
Transformation Svcs Tech  
Sales Mastery V1

**Version** : DEMO

1. What is one important way that IBM Host Access Transformation Services (HATS) can be used?

A. HATS can be used to develop middleware applications that account for asynchronous transaction processing.

B. HATS can be used to develop existing terminal applications in COBOL directly on the mainframe.

C. HATS can be used to develop Java-based JINI secure components.

D. HATS can be used to transform and expand the connectivity of your terminal applications by extending the proven business logic as Web services.

Answer: D

2. How is the Eclipse platform used with IBM Host Access Transformation Services (HATS)?

A. HATS uses the middleware connectivity embedded in Eclipse to access transaction processing middleware.

B. HATS allows you to connect to Java JINI security objects using the Eclipse-based platform.

C. HATS gives you the ability to transform access to your existing host applications using rich client GUI applications that run in Eclipse.

D. HATS does not use the Eclipse-based platform.

Answer: C

3. What operating systems are supported for running an IBM Host Access Transformation Services (HATS) Rich Client Platform (RCP) application?

A. Windows 2000, Windows XP, RedHat Enterprise Linux 4.0, Novell Linux Desktop 9

B. Windows XP, Windows Vista, and MacOS

C. Only i5/OS V5R4

D. Only Windows 2000 and Windows XP

Answer:A

4. How does IBM Host Access Transformation Services (HATS) simplify combining multiple screens of tabular data?

A. HATS uses a Java interface that transforms multiple screens into middleware to support SOA.

B. HATS combines multiple screens of data outside of the HATS tools using third-party tools.

C. Multiple screens of data cannot be combined using HATS.

D. HATS provides a screen combination wizard and editor to combine data from multiple host screens.

Answer: D

5. What is IBM Host Access Transformation Services (HATS)?

A. HATS allows for WebSphere to transform XSLT transformations into Java code.

B. HATS is a set of tools that allow you to easily create Web, portal, or rich client applications that provide an easy-to-use GUI for your green screen applications.

C. HATS is a process in which HTML transformations are performed inside a Java script.

D. HATS is a single Java library that adds on to WebSphere.

Answer: B
