Exam : SY0-301

**Title : Security+ Certification Exam
2011 version**

Version : Demo

1.Which of the following is the BEST approach to perform risk mitigation of user access control rights?

- A. Conduct surveys and rank the results.
- B. Perform routine user permission reviews.
- C. Implement periodic vulnerability scanning.
- D. Disable user accounts that have not been used within the last two weeks.

Answer: B

2.Which of the following devices is BEST suited for servers that need to store private keys?

- A. Hardware security module
- B. Hardened network firewall
- C. Solid state disk drive
- D. Hardened host firewall

Answer: A

3.All of the following are valid cryptographic hash functions EXCEPT:

- A. RIPEMD.
- B. RC4.
- C. SHA-512.
- D. MD4.

Answer: B

4.In regards to secure coding practices, why is input validation important?

- A. It mitigates buffer overflow attacks.
- B. It makes the code more readable.
- C. It provides an application configuration baseline.
- D. It meets gray box testing standards.

Answer: A

5.Which of the following would be used when a higher level of security is desired for encryption key storage?

- A. TACACS+
- B. L2TP
- C. LDAP
- D. TPM

Answer: D

6.A security administrator needs to determine which system a particular user is trying to login to at various times of the day.

Which of the following log types would the administrator check?

- A. Firewall
- B. Application
- C. IDS
- D. Security

Answer: D

7.Which of the following **MUST** be updated immediately when an employee is terminated to prevent unauthorized access?

- A. Registration
- B. CA
- C. CRL
- D. Recovery agent

Answer: C

8.Employee badges are encoded with a private encryption key and specific personal information. The encoding is then used to provide access to the network.

Which of the following describes this access control type?

- A. Smartcard
- B. Token
- C. Discretionary access control
- D. Mandatory access control

Answer: A

9.Which of the following devices would **MOST** likely have a DMZ interface?

- A. Firewall
- B. Switch
- C. Load balancer
- D. Proxy

Answer: A

10.Which of the following application security testing techniques is implemented when an automated system generates random input data?

- A. Fuzzing
- B. XSRF
- C. Hardening
- D. Input validation

Answer: A

11.Which of the following can be used by a security administrator to successfully recover a user's forgotten password on a password protected file?

- A. Cognitive password
- B. Password sniffing
- C. Brute force
- D. Social engineering

Answer: C

12.A security administrator wants to check user password complexity.

Which of the following is the **BEST** tool to use?

- A. Password history

- B. Password logging
- C. Password cracker
- D. Password hashing

Answer: C

13.Certificates are used for: (Select TWO).

- A. Client authentication.
- B. WEP encryption.
- C. Access control lists.
- D. Code signing.
- E. Password hashing.

Answer: A,D

14.Which of the following is a hardware based encryption device?

- A. EFS
- B. TrueCrypt
- C. TPM
- D. SLE

Answer: C

15.Which of the following BEST describes a protective countermeasure for SQL injection?

- A. Eliminating cross-site scripting vulnerabilities
- B. Installing an IDS to monitor network traffic
- C. Validating user input in web applications
- D. Placing a firewall between the Internet and database servers

Answer: C

16.Which of the following MOST interferes with network-based detection techniques?

- A. Mime-encoding
- B. SSL
- C. FTP
- D. Anonymous email accounts

Answer: B

17.A certificate authority takes which of the following actions in PKI?

- A. Signs and verifies all infrastructure messages
- B. Issues and signs all private keys
- C. Publishes key escrow lists to CRLs
- D. Issues and signs all root certificates

Answer: D

18.Use of a smart card to authenticate remote servers remains MOST susceptible to which of the following attacks?

- A. Malicious code on the local system

- B. Shoulder surfing
- C. Brute force certificate cracking
- D. Distributed dictionary attacks

Answer: A

19. Separation of duties is often implemented between developers and administrators in order to separate which of the following?

- A. More experienced employees from less experienced employees
- B. Changes to program code and the ability to deploy to production
- C. Upper level management users from standard development employees
- D. The network access layer from the application access layer

Answer: B

20. A security administrator needs to update the OS on all the switches in the company.

Which of the following **MUST** be done before any actual switch configuration is performed?

- A. The request needs to be sent to the incident management team.
- B. The request needs to be approved through the incident management process.
- C. The request needs to be approved through the change management process.
- D. The request needs to be sent to the change management team.

Answer: C
