Title : Adobe Commerce Front-end Developer Professional

Version : DEMO

1.After creating a new storefront theme, the developer does not see it taking effect on the site.

Where in the Admin Panel can the developer find the settings to apply it?

- A. System > Design > Template
- B. Content > Design > Configuration
- C. Stores > Configuration > Design
- D. Stores > Design > Themes

Answer: B

2.An Adobe Commerce developer has created a custom theme that extends the Blank theme.

Which less file imports necessary files and outputs styles to be included in <style> tag for emails?

- A. _email.less
- B. email.less
- C. _email-extend.less
- D. _email-styles.less

Answer: B

3.A developer needs to apply a custom theme to only the 'Electronics' category within a Magento store.

Which approach should they use?

- A. Apply the theme globally and use CSS to modify the 'Electronics' category.
- B. Use the Magento Admin panel to apply the theme specifically to the 'Electronics' category.
- C. Modify the category_view.xml file in the theme to specify changes.
- D. Create a module to programmatically switch themes based on category.

Answer: B

4.What is the primary role of layout XML files in Magento?

- A. They define the module's backend functionality.
- B. They control the visual structure of the website.
- C. They store the website's CSS and JavaScript.
- D. They configure the website's payment options.

Answer: B
