Exam : C1000-207

**Title : IBM watsonx Orchestrate AI
Engineer v1 – Associate**

Version : DEMO

1. When configuring a new channel connection for an existing agent, what is the first deployment choice that must be made to proceed with configuration?

- A. Enabling Voice Mode or the Home page display for the channel
- B. Selecting the specific environment where the connection will be created
- C. Choosing the appropriate Twilio or Genesys account to authenticate the external service
- D. Selecting which other agents will be connected to collaborate in the unified conversation flow

Answer: B

2. Which type of authentication is typically required when integrating watsonx Orchestrate with a secure enterprise application like SAP or Workday?

- A. No authentication (Public)
- B. OAuth 2.0
- C. ROT13 encoding
- D. Anonymous Guest login

Answer: B

3. How does watsonx Orchestrate maintain "Context" when a user moves from one sub-agent to another?

- A. It asks the user to repeat everything they just said
- B. The Orchestration Engine passes session state and variables between agents
- C. It saves the entire conversation to a public website
- D. It doesn't; context is always lost immediately

Answer: B

4. What is "Agentic Loop" in orchestration?

- A. A software bug that never ends
- B. The process where an agent can reason, act, observe, and repeat until a goal is met
- C. A physical cable that is plugged into itself
- D. A decorative border around the chat box

Answer: B

5. When integrating with MCP tools, what is the role of a "Tool Definition"?

- A. To describe the tool's inputs and capabilities.
- B. To physically repair the server hardware.
- C. To advertise the tool on social media
- D. To count the total number of tools used

Answer: A
