We offer free update service for one year.

Exam : C90-02A

Title : Cloud Technology Concepts

Version : Demo

1.Which of the following cloud computing mechanisms can exist as a service agent that monitors and keeps track of communication between cloud service consumers and cloud services for load balancing purposes?

Select the correct answer.

- A.multi-device broker
- B.pay-for-use monitor
- C.resource replicator
- D.automated scaling listener

Answer: D

2.A failover system can increase _____ and _____ by using _____ technology.?

Select the correct answer.

- A.resources, usage thresholds, legacy
- B.reliability, availability, clustering
- C.flexibility, integrity, real-time
- D.confidentiality, responsiveness, cloud

Answer: B

3.A virtual server is a form of _____ software that emulates a(n) _____ computer.

Select the correct answer.

- A.virtual monitoring, on-premise
- B.virtual monitoring, cloud-based
- C.virtualization, physical
- D.virtualization, logical

Answer: C

4.The _____ is a service agent that can measure the usage of a cloud-based IT resource by a cloud consumer for billing purposes.

Select the correct answer.

- A.automated scaling listener
- B.pay-for-use monitor
- C.multi-device broker
- D.resource replicator

Answer: B

5.A _____ is a pre-defined cloud-based platform comprised of a set of already installed IT resources that can be used and customized by a cloud consumer.

Select the correct answer.

- A.failover system
- B.pay-for-use monitor
- C.ready-made environment
- D.multi-device broker

Answer: C

6.A _____ is an IT resource that contains mapping logic capable of performing runtime transformation to enable communication between a cloud service and different types of cloud service consumers.

Select the correct answer.

- A.failover system
- B.pay-for-use monitor
- C.ready-made environment
- D.multi-device broker

Answer: D

7.Which of the following is an IT resource that can be provided in a ready-made environment?

Select the correct answer.

- A.database
- B.development tool
- C.virtual server
- D.All of the above.

Answer: D

8.A _____ is a mechanism used to temporarily persist certain types of data as an alternative to caching the data in memory.

Select the correct answer.

- A.resource replicator
- B.state management database
- C.failover system
- D.multi-device broker

Answer: B

9.A hypervisor can independently manage and monitor the virtualization of multiple virtual servers, and is therefore associated with the _____ mechanism.

Select the correct answer.

- A.pay-for-use monitor
- B.automated scaling listener
- C.multi-device broker
- D.None of the above.

Answer: D

10.Which of the following cloud computing mechanisms helps enable on-demand usage by allowing cloud services to be configured to support higher usage thresholds automatically, and within pre-defined parameters?

Select the correct answer.

- A.pay-for-use monitor
- B.automated scaling listener

- C.multi-device broker
- D.resource replication

Answer: B

11.Assuming a cloud service is configured to support on-demand usage, which of the following cloud computing mechanisms would the cloud provider need to use in order to keep track of what to charge cloud consumers?

Select the correct answer.

- A.on-demand usage listener
- B.multi-device broker
- C.resource billing replicator
- D.None of the above.

Answer: D

12._____ represents the ability of a cloud platform to keep track of the usage of its IT resources by cloud consumers, and is therefore directly related to the _____ mechanism.

Select the correct answer.

- A.Replicated usage, cloud monitor
- B.Measured usage, pay-for-use monitor
- C.Agent usage, on-premise monitor
- D.None of the above.

Answer: B

13.Which of the following IT resources are examples of multi-device brokers?

Select the correct answer.

- A.An XML gateway that performs runtime transformation of messaging protocols.
- B.A cloud storage gateway that performs runtime transformation of cloud storage device protocols.
- C.A middleware product that performs runtime transformation of XML schemas.
- D.All of the above.

Answer: D

14.A cloud service can be hosted by a physical server or a virtual server. When using the failover system mechanism, the same cloud service cannot be hosted by more than one physical server.

Select the correct answer.

- A.True
- B.False

Answer: B

15.Which of the following statements are true about the failover system mechanism?

SELECT ALL THAT APPLY

- A.A failover system can only be used for legacy batch programs.
- B.A failover system cannot span over more than one geographical region.
- C.A failover system can be used to make redundant implementations of the same cloud service.
- D.A failover system can be used to avoid introducing cloud services as single points of failure.

Answer: CD
