We offer free update service for one year.

Exam : COH100

**Title : Cohesity Certified
Protection Associate -
DataProtect**

Version : DEMO

1.An administrator needs to restore only a small subset of data rather than an entire system.

Which recovery option is most appropriate?

- A. Full system restore
- B. Granular or file-level recovery
- C. Replication failover
- D. Archive rehydration

Answer: B

2.Which factor most directly affects how quickly a recovery can be completed?

- A. Retention duration
- B. Report generation frequency
- C. Chosen recovery method
- D. Storage domain name

Answer: C

3.A Cohesity administrator anticipates rapid data growth and wants to expand capacity without rearchitecting the solution or interrupting backup operations.

Which Cohesity capability directly supports this requirement?

- A. Manual redistribution of storage domains
- B. Scale-out node-based architecture
- C. Fixed-capacity cluster design
- D. Dependency on external tape libraries

Answer: B

4.How do RTO requirements influence recovery strategy?

- A. They determine backup retention only
- B. They control replication schedules
- C. They affect reporting frequency
- D. They guide the choice of recovery method

Answer: D

5.What ensures recovery consistency for distributed applications?

- A. Separate Protection Groups
- B. Coordinated Protection Group backups
- C. Increased retention duration
- D. Independent backup windows

Answer: B
