Exam : HPE0-G05

**Title : HPE Morpheus Enterprise
Software Automation
Specialist Exam**

Version : DEMO

1.You want to use a Script Template to install a package. You want the template to be smart enough to use yum on RHEL and apt on Ubuntu.

Does the following code snippet within the template achieve this?

```
<% if (instance.osFamily == 'debian') { %> apt-get install -y mypkg <% } else { %> yum install -y mypkg <% } %>
```

A. Yes

B. No

Answer: A

2.When creating a File Template, you need to dynamically insert the IP address of the primary network interface of the instance being provisioned.

Which variable should be used?

A. <%= instance.ip %>

B. <%= server.internalIp %>

C. <%= container.ipAddress %>

D. <%= network.primary.address %>

Answer: B

3.You need to ensure that when an App is deleted, the DB Tier is deleted only after the Web Tier has been successfully removed.

How is this configured?

A. Set the "Teardown Order" in the Blueprint (higher numbers delete first).

B. Morpheus automatically reverses the "Tier Order" during deletion.

C. Create a manual Teardown Workflow with a "Wait" task.

D. Deletion order is not configurable; all tiers delete in parallel.

Answer: B

4.Which Morpheus component is used to define a reusable block of code that can be imported into multiple Script Templates or Tasks to maintain consistency (e.g., a standard logging function)?

A. Cypher Mount

B. Script Template (referenced via include)

C. Task Set

D. Option List

Answer: B

5.An App Blueprint has a "Post-Provision" Workflow defined at the Blueprint level, and another defined at the Instance level.

In what order do they run?

A. Instance Workflow runs first, then Blueprint Workflow.

B. Blueprint Workflow runs first, then Instance Workflow.

C. Only the Blueprint Workflow runs; it overrides the Instance.

D. They run in parallel.

Answer: A
