Exam : UiPath-ABAv1

**Title : UiPath Certified
Professional Automation
Business Analyst
Professional v1.0**

Version : DEMO

1.In the PDD, what should a complete Out of Scope section contain?

- A. List of out of scope process steps and inputs
- B. List out of scope process steps, reason and impact on the to Be process
- C. List of out of scope process steps
- D. List of out of scope inputs & outputs

Answer: B

Explanation:

The Out of Scope section of a PDD (Process Definition Document) should include detailed information on processes or sub-processes that are not included in the scope of the RPA (Robotic Process Automation) project. This should not only list the out-of-scope steps but also provide the reasons why they are not included and the impact this exclusion has on the to-be process. Understanding and documenting what is out of scope is crucial for setting clear boundaries and expectations for the project, ensuring that all stakeholders have a common understanding of what the automation will and will not cover.

2.Which of the following types of Assets are available in UiPath Orchestrator?

- A. Text, Number, Integer, Credential
- B. Text, Bool, Integer, Credential
- C. Text, Bool, Number, Credential
- D. Text, Bool, Integer Number

Answer: C

Explanation:

In UiPath Orchestrator, assets can be defined as reusable resources that can be shared across multiple automation projects. The types of assets available in UiPath Orchestrator include Text, Bool, Number, and Credential. These asset types are designed to support a variety of data types and use cases in automation, such as storing credentials securely, keeping configuration values, or managing flags for process flows.

3.What is a Test Case template?

- A. Is a document that outlines only the exceptions of a particular test
- B. Is a document that outlines the steps and expected results of the entire project
- C. Is a document that outlines the steps and expected results of a particular test
- D. Is a document that outlines only the exceptions of the entire project

Answer: C

Explanation:

A Test Case template is a standardized document that outlines the steps to be performed for a test, along with the expected results for each step. It serves as a detailed guide for testing a particular functionality or feature within a project, ensuring that all necessary scenarios are covered and results are accurately recorded. This document is essential for systematically validating the functionality of the automation and identifying any discrepancies from the expected behavior.

4.What is a key feature of Automation Hub that offers an overview on the automation program?

- A. Pipeline manager
- B. Citizen Developers manager
- C. License usage tracker
- D. Process documentation creation

Answer: A

5.DRAG DROP

What is the correct order of the stages of Process Documentation?

Instructions: Drag and Drop the items on the left to the boxes on the right in a correct order.

Stages	Answer Area
Update the document by including more scenarios and business rules and validate it with the Process Owner	1st
Gather all the process information and data	2nd
Prepare the PDD and include any support material that would detail the business rules, roles matrix, the input & output etc	3rd
Prepare the detailed Level 4 process map (including all scenarios) for the As-Is process	4th
Prepare a high-level process map with process description	5th

Answer:

Stages

Answer Area

Update the document by including more scenarios and business rules and validate it with the Process Owner

1st

Gather all the process information and data

Gather all the process information and data

2nd

Prepare a high-level process map with process description

Prepare the PDD and include any support material that would detail the business rules, roles matrix, the input & output etc

3rd

Prepare the detailed Level 4 process map (including all scenarios) for the As-Is process

Prepare the detailed Level 4 process map (including all scenarios) for the As-Is process

4th

Prepare the PDD and include any support material that would detail the business rules, roles matrix, the input & output etc

Prepare a high-level process map with process description

5th

Update the document by including more scenarios and business rules and validate it with the Process Owner
