Exam : **ZDTE**

Title : Zscaler Digital Transformation Engineer

Version : DEMO

1.A finance department requires SFTP to [HIDDEN URL] that shifts IPs on a CDN. A firewall allow uses a wildcard FQDN and the Finance department scope. Finance reports blocks when the IP rotates after TTL.
Which action should address the cause and stabilize the outcome?
A. Use a URL category allow for the partner domain for Finance
B. Raise the wildcard FQDN rule order above the default deny
C. Forward Finance DNS to ZIA and bind the rule to FQDN and department
D. Replace FQDN with partner CIDR addresses in the allow rule
Answer: C

2.System Audit Report baseline shows a drop in auth frequency and PAC errors for EMEA remote users to Microsoft 365. Web block ratios remain stable. A new regional site code was added yesterday.
Which action should address the access failures?
A. Audit PAC logic for region match; test and correct
B. Lower global threat thresholds to ease Microsoft 365 access
C. Increase DLP rule tolerance for Microsoft content uploads
D. Widen ZPA app segments for remote user access
Answer: A

3.A global firm needs standardized egress with identity/posture across ZIA/ZPA. Cloud workloads require fixed egress IPs. The main campus has consumer-grade gear without GRE or a static public IP. Most staff are frequent travelers needing posture and roaming consistency. On trusted office networks, send web to ZIA while local/private apps should avoid hairpinning.
Which mix meets these requirements?
A. Workloads: GRE; Campus: PAC; Staff: PAC; Office: force ZPA hairpin
B. Workloads: IPSec; Campus: ZCC; Staff: ZCC; Office: local bypass
C. Workloads: PAC; Campus: IPSec; Staff: GRE; Office: ZPA path always
D. Workloads: ZCC; Campus: GRE; Staff; PAC; Office: wide direct
Answer: B

4.A support tool app [HIDDEN URL] is blocked for a small site. ZDX shows good device health, ZPA diagnostics list Access Policy Name 'Ops-Allow', and logs show evaluation against location 'HQ' despite the user being in 'Branch-17'. PAC file for ZCC shows hardcoded
proxy for HQ subnets.
What should be done?
A. Increase Ops-Allow scope and ignore location criteria for temporary access
B. Disable Browser Access settings and rely on native client connections now
C. Change connector selection to another data center and retry after cache
D. Fix PAC steering so Branch-17 routes match correct path and location
Answer: D

5.An engineer has a user on a known office LAN. The goal is to avoid routing their private app traffic through the ZTE.
Which action fits the design intent?

A. Add ZIA bypass for [HIDDEN URL] to adjust GeoIP path.
B. Set Client Connector trusted-network bypass for that site.
C. Broaden app policy to permit direct LAN reach.
D. Deploy a Private Service Edge for the office LAN.
Answer: B
